TIMBER CLAD WPC

TIMBER DECK WPC

WOOD PLASTIC COMPOSITE WPC

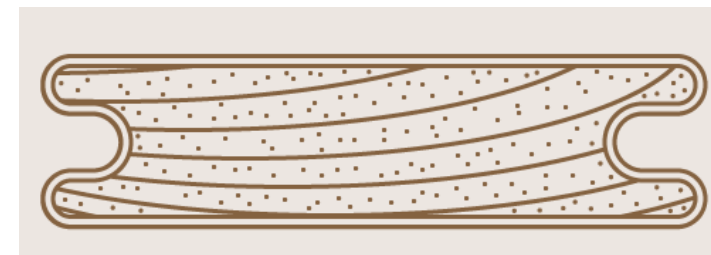

WPC CO-EXTRUSION

Co-extruded technology allows for the incorporation of intricate and realistic wood grain patterns on the outer layer, providing a natural and authentic appearance. The advanced manufacturing process enables a level of detail that mimics the look of traditional wood, making co-extruded WPC a visually appealing choice.

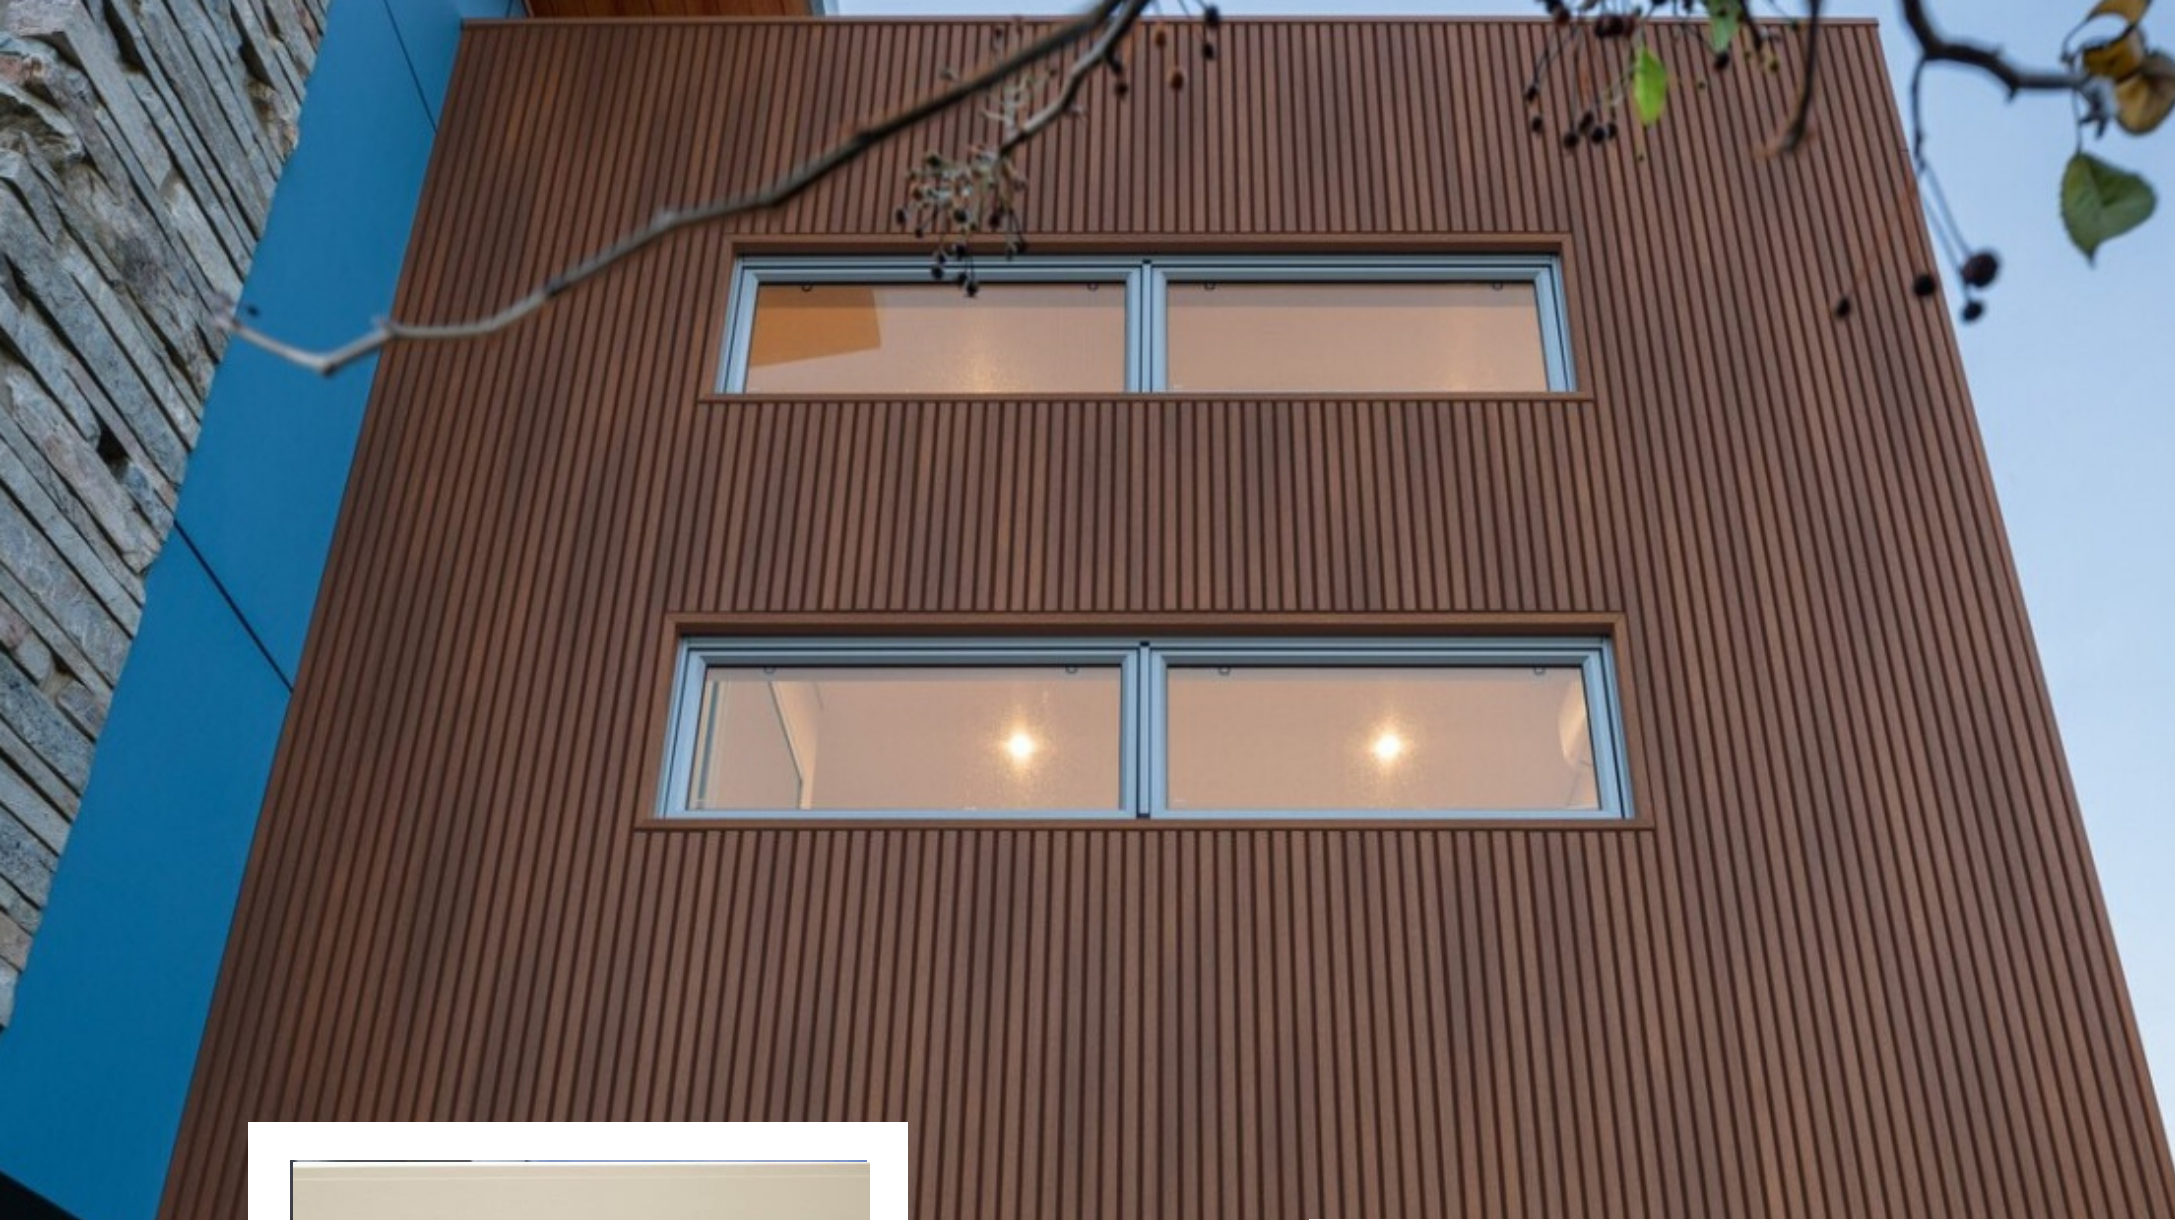

COMPOSITE DECKING

Composite wood is at least partially made of wood fibers, like veneers, scraps, or sawdust, but it isn't true lumber directly from a tree.
